NEW YORK CITY, NEW YORK, UNITED STATES, November 9, 2022

/EINPresswire.com/ -- Alkyl

Naphthalene Sulfonates (ANS) are a class of synthetic organic compounds that are used in a variety of industries.

They are made by sulfonating naphthalene, which is a component of coal tar. ANS have many uses, including as surfactants, dispersants, and emulsifiers.

ANS are very effective surfactants, meaning they can reduce the surface tension of water. This makes them useful for cleaning products and other industrial applications. ANS are also good

dispersants, which means they can help keep particles suspended in liquids. This makes them useful for paints and other products that need to maintain a uniform mixture. Finally, ANS are also good emulsifiers, meaning they can help keep oil and water from separating. This makes them useful for food products and cosmetics.
