Stem cells are type of cells which has potential of self-regeneration and multiplex differentiation and can be classified into various types of adult cells, such as ESCs, iPSCs, and somatic stem cells. Exosomes isolated from

various stem cells can help to regenerate the tissue in the limbs, skin, heart, and other tissues. Exosomes are sold as diagnostic devices, therapeutic agents, cosmeceuticals, research tools, and much more. The demand for stem cell exosome therapeutic is increasing rapidly owing to the

rising prevalence of chronic inflammation, autoimmune disease, Lyme disease, and other chronic degenerative diseases. Moreover, the emerging research activities in exosome therapeutics are expected to increase the adoption of stem cell exosome therapeutics. The stem cell exosome therapeutic market is a segment based on source type, application, and geography. Based on source type, the global market is segregated into dendritic cells, MSC, umbilical MSC, plasma, and others. The

MSC or mesenchymal stem cells segment dominated the [global stem cell exosome therapeutic](https://www.insightaceanalytic.com/report/global-stem-cell-exosome-therapeutic-market/1133) market. The high adoption of mesenchymal stem cells for treatment of degenerative and inflammatory disease is further projected to boost the market growth. In terms of application, the global stem cell exosome therapeutic market is divided into precision medicine, regenerative medicine, and others. In 2019, regenerative medicine dominated the global market. Stem cell therapies are appropriate therapeutics for regenerative diseases.
