Hormones refer to chemical messengers that play an essential role in controlling fertility, mood and growth of the human body. Hormone replacement therapy (HRT) is utilized for replenishing the hormones that are present at low levels in the human body. This treatment is particularly favorable for patients experiencing growth hormone deficiency, women nearing menopause and older people suffering from hypogonadism. It is widely available in several forms, such as estrogen and testosterone gels, injections, skin patches and implants. It plays a significant role in reducing hot flashes, risk of osteoporosis, night sweats, pain, itching during intercourse and vaginal dryness.
