

This New Ergonomic M MESH M CHAIR Will Change The Way People Work

CHIAYI COUNTY, TAIWAN, November 15, 2022 /EINPresswire.com/ -- A brand new [ergonomic chair](#) has hit the market and aims to relieve discomfort while offering style and support. With a sleek design and stark attention to ergonomics, this research-backed chair is suitable for both work-from-home and office environments.

Devised of grid-structured durable mesh material and a carefully angled backrest, this ergonomic chair checks all of the boxes for what buyers want in a high-quality mesh chair. Mesh material is ideal due to its breathability and cooling qualities.

The flexible mesh system has been meticulously curated based on technological calculations to provide optimal support for the body. Also implemented based on careful research and development is the lumbar support function. This chair is locked at a 90-degree angle for standard ergonomic positioning and fully supports the curve of the spine with special attention to the lower back.

However, what truly makes this chair unique is its intelligent lever design. This state-of-the-art system intuitively adjusts its incline degree based on the body's weight in addition to the weight of the back, allowing for a fully customizable sitting experience.

In addition to ergonomics and style, reasonable consumer concern is the safety of the items they introduce into their homes and offices. This ergonomic mesh chair is BIFMA-certified, meaning it is held to rigorous furniture industry requirements for safety, sustainability, and durability.

Consumers will find comfort in knowing that this product has been tested and upheld to the highest standards, including a back strength test, a sandbag free fall impact test, and numerous other tests that furniture is required to pass in order to receive this accreditation. BIFMA

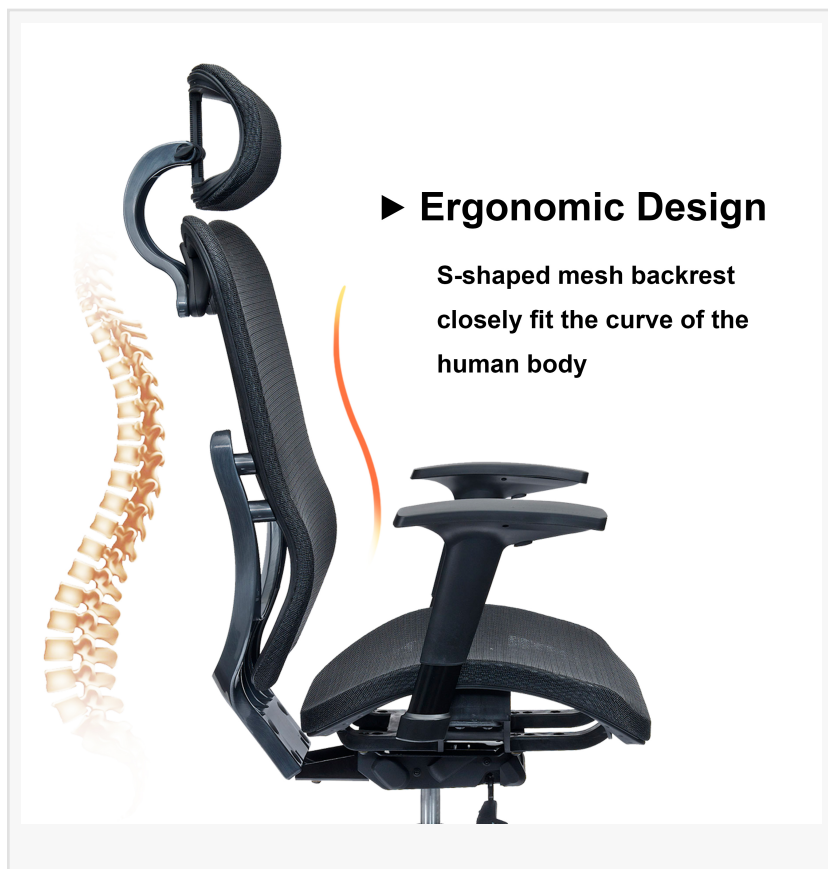

(Business + Institutional Furniture Manufacturers Association) has become the standard for general government agencies, commercial procurement, and design agencies.

Finally, this innovative new chair is built to last. The mesh material is fairly elastic, allowing it to slightly stretch and form to the body while returning to its original shape and structure while not in use. The product is also easy to clean and resistant to fading typical of prolonged use. Able to support up to 120 kg (265 lbs), this versatile chair is recommended for all body sizes and types and is sure to be a hit this season.

The M MESH M CHAIR chair can currently be purchased on Amazon. A limited-time promotional code can be applied at checkout from 12/1/2022 - 12/31/2023: NEWSFOR2023
