EINPresswire.com/ -- The global [Endpoint Detection and Response market](#) is forecast to reach USD 14.90

Billion by 2030, according to a new report by Reports and Data. Endpoint Detection and Response (EDR) is a technology that addresses the need for response to advanced threats and continuous monitoring. It is a subset of endpoint technology and also a critical piece of an optimal security posture.

The primary focus of the EDR is not to automatically stop threats in the pre-execution phase on an endpoint but on providing the right endpoint visibility. The rise in EDR adoption is driving the increase in the number of endpoints attached to networks. Another driving factor is the increased sophistication of cyberattacks, which often focus on endpoints as easier targets for infiltrating a network. EDR is an emerging technology that caters to the demand for continuous monitoring and response to advanced threats. It could even be said that endpoint detection and response is a form of advanced threat protection.

There are growing number of cases of enterprise endpoint attacks globally and it has increased the need for Endpoint Detection and Response Market. Amnesty International's Hong Kong office, in April 2019, was hit by a year-long cyberattacks from hackers. In the same month, medical billing service provider 'Doctors' Management Service' witnessed a ransomware attack that compromised the patients' data from a number of its clients. These kinds of incidents are leading to an emerging demand for incident response services.
