

# By 2028, Conditions for Human Life on Earth Will be Almost Unlivable, the Worldwide Forum Reported on November 12, 2022

*According to a mathematical model developed by an interdisciplinary team of scientists, the terminal date for the destruction of our planet is October 2036.*

NEW YORK, NY, USA, November 15, 2022 /EINPresswire.com/ -- The global online forum aired on Sunday, November 12, 2022, entitled "[Global Crisis. Our Survival Is in Unity](#)". It was simultaneously translated into 150

languages spoken by approximately 90% of the world's population. The Forum lasted 12 hours and showcased the solution to the escalating global crisis. Every country is being transformed from a consumerist to a creative society by incorporating the 8 pillars of the Creative Society into its constitutions. This will enable the subsequent alignment of legislation with the renewed Constitution. At the same time, the model proposes to introduce self-government and create an e-voting platform. The politician will become the implementer of the will of the citizens exercising responsibility instead of power.

“

As early as 2028, the conditions for human life on Earth will be almost unbearable. The mathematical model is based on publicly available data that can be verified and cross-checked.”

*E. Chromova*

In the climate part of the Forum, a crucial fact about the state of the planet was announced: in 1998, the planet's core abruptly shifted, causing the Earth's rotation to accelerate. According to a mathematical model developed by an interdisciplinary team of scientists, the terminal date

for the destruction of our planet without the Creative Society is October 2036. As early as 2028, the conditions for human life on Earth will be almost unbearable. [The mathematical model](#) is based on publicly available data that can be verified and cross-checked.

E. Chromova, the Head of the scientific group, stated why it is not possible to name the whole

team. This is because a large part of the scientific community is forced to remain incognito in order to protect their lives. "The names of the true authors of the hypothesis presented in today's report we will learn only in the Creative Society, and you will be amazed what famous names you will hear among them." she added.

As part of the event, [Robby Wells, US politician](#) and a 2020 presidential candidate who will announce no later than 1 January 2023 whether he will run in the 2024 US presidential election, gave his speech. He said: "The cornerstone of my election [campaign] , if I choose to run, will be the building of the Creative Society. Because only the incorporation of the 8 Pillars of the Creative Society into the Constitution will guarantee a secure, stable, comfortable, and happy life for all people." According to him, everything that people in the U.S. and all over the Earth need is spelled out in these 8 pillars because the people themselves formulated them.

The forum showcased a number of significant topics that were previously unreported to the general public. Here are just a few of them::

- > Global climate event monitoring, eyewitness accounts; the topic of data manipulation in databases
- > What is happening to the Earth's core
- > Cosmic destabilizing impact on the entire Solar System
- > State of the environment
- > Benefits of the Creative Society

Participants of the conference emphasized that people must know the truth that in the coming decades all of humanity may be swept away by cataclysms unless the entire humanity undertakes joint efforts to overcome this enemy.

The mathematical model is based on publicly available data that can be verified and cross-checked.

Global Crisis. Our Survival is in Unity | International Online Forum Aired on November 12, 2022

---> Self-government, economics, technology, and healthcare in the Creative Society  
---> Fuel-free energy generators  
---> Film: The Diary of the Last Man  
---> Film: A Housewife's Story (how a housewife's life will change in the Creative Society)

At the conference, there was an appeal to climate scientists who defend the anthropogenic factor, to step over their pridefulness and talk about the real causes of climate change.
