Blood group typing market to find numerous growth opportunities on the back of growing number of infectious diseases, finds Research Nester
The global blood group typing market is estimated to grow majorly on account of the increasing

cases of blood cancer such as leukemia and lymphoma around the world. Approximately 60,650 new cases of leukemia were diagnosed in the year 2022, 24,000 leukemia-related deaths were reported, and 20,050 cases of acute myeloid leukemia (AML) were reported. The growing number of road accidents, blood transfusions, and donor registrations is also expected to drive the growth of the blood group typing market over the forecast period.

The global blood group typing market is segmented on the basis of end user into hospitals, blood banks, clinical laboratories and other. The blood banks segment is to garner the highest revenue by the end of 2033 by growing at a significant CAGR over the forecast period owing to the increasing number of blood donation centers and banks around the world. It was observed that about 106 million blood donations were collected in 169 countries by 13,300 blood centers. Furthermore, rising blood donation campaigns and government awareness campaigns are expected to boost segment growth.
