Cloud infrastructure refers to the infrastructure that is computer-generated and can be accessed

over the network. With the help of IaaS, the model delivers on-demand products and services. Users, small and large businesses alike have the option to store and process data privately or through a third-party cloud computing and storage solution. IaaS, a cloud model, allows organizations to rent IT infrastructure components such as storage and computing equipment over the internet.

Trends in big data and analytics are increasing, as well as ICT spending and demand from many organizations for cost-effective, scalable computing and an increase in the number of digital services. The cloud infrastructure market is constrained by concerns about data security and privacy, and a decrease in demand for server hardware because of virtualization. Cloud infrastructure's opportunities are in the development of analytics and its adoption by small and medium-sized enterprises.
