Key Trends In The Pharmaceutical Drugs Market

Pharmaceutical companies are increasingly using biomarkers in the drug development process to reduce the time taken to bring the product into the market. Biomarkers are biological

indicators which are objectively measured and evaluated for biological processes, pathogenic processes or pharmacological responses to a therapeutic intervention. They are helpful to predict the drug efficacy faster than conventional clinical endpoints, the point at which an undesired or abnormal effect of the drug is observed indicating withdrawal from therapy. Companies in this market are investing in the development of biomarkers for use in various activities such as tracking drug activity, studying pharmacodynamics (relationship between the drug concentration at the site of action and the biochemical and physiological effect) of drugs and to study diseases and treatment pathways. Companies such as Genentech and Janssen are increasingly investing in the use of biomarkers for understanding the efficacy of a potential respiratory drug. For example, Janssen has partnership with U-BIOPRED (unbiased biomarkers in prediction of respiratory disease outcomes), a group in Europe that aims to understand more about severe asthma.
