EINPresswire.com/ -- The Global
[Astronomical Telescope Market](#) is

forecasted to grow from 243.8 Thousand Units in 2021 to 497.0 Thousand Units in 2030 with a CAGR of 8.2% over the forecast period. The market is forecasted to reach USD 497.0 Million by 2030, according to a new report by Reports and Data. This can be mainly associated with the increase in economic investment on astronomical research, the national consumption capacity, and the national policies on astronomical education. Astronomical education is the methods adopted globally to create interest among the generations about Earth, astronomy and space science. Astronomical education and research compile the full range of studies—from the physics of invisible elementary particles to the nature of space and time to biology regarding the natural phenomena. These qualities make astronomical studies a valuable way of raising awareness among people about science, by introducing scientific concepts and encourage scientific thinking to students at all levels.

For instance, there are approximately 1,100 planetariums in North America, out of which 30 percent of them are available to school groups only, and 70 percent serve both school and public shows. The shift in interest preferences of amateur astronomy may hinder the growth of the market. Amateur astronomy participants may not necessarily have advanced academic training or degree in astrophysics. Amateur astronomy is an expensive hobby with requirement of modern and precise telescope and lenses etc.
