A cement mixer is an equipment that homogeneously mixes cement, aggregate sand or gravel, and water to form concrete. Cement is a crucial component of construction, which is made by grinding together a mixture of clay and limestone and is widely used across the globe. A concrete mixer consists of a revolving drum and blade to mix the components and is available in a number of types and sizes. It helps save time and reduces the formation of cement lumps, which is why it is witnessing a significant demand across the globe. The cement mixers are available in batch and continuous in the market.

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.
