

# Intrauterine Contraceptive Devices Market records a Y-O-Y growth of 5.6%, Predicts by Market.us

*The North American region is expected to be the largest market for intrauterine contraceptive devices, followed by Europe and Asia-Pacific.*

NEW YORK CITY, NEW YORK, UNITED STATES, November 19, 2022

/EINPresswire.com/ -- Intrauterine contraceptive devices (IUDs) are one of the most effective forms of birth control available. IUDs are small, T-shaped devices that are inserted into the uterus by a healthcare provider. IUDs work by preventing sperm from fertilizing an egg. There are two types of IUDs available in the United States: the copper IUD and the hormonal IUD. The copper IUD can be used for up to 12 years, while the hormonal IUD can be used for up to 5 years.

In the United States, the [intrauterine contraceptive devices market](#) is forecast to grow at a compound annual rate of 5.6% from 2020 to 2025, driven by the declining birth rate and the aging population of women in their reproductive years.

The IUD is a long-acting, reversible form of contraception that is highly effective in preventing pregnancy. IUDs are small, T-shaped devices that are inserted into the uterus by a healthcare provider. IUDs work by creating a barrier that prevents sperm from fertilizing an egg or by changing the lining of the uterus so that implantation cannot take place. Grasp more about the additional trends impacting the future of the market and the positive and negative consequences on the businesses, [download a sample report](#).

There are two types of IUDs available in the United States: hormonal and copper. Hormonal IUDs release a small amount of progestin, which thickens cervical mucus and prevents sperm from reaching the egg.

The major factors driving the growth of the market are the rising awareness about family planning and the government initiatives taken to promote the use of contraception. However, the high cost of intrauterine devices is restraining the market growth. The North American region is expected to be the largest market for intrauterine contraceptive devices, followed by Europe and Asia-Pacific. The growing number of women opting for long-acting reversible contraception in North America is one of the key factors driving the growth of this market in this region.
