Utilities Market Trends

Electric power generation companies are increasingly using batteries to store solar energy during daylight hours. These energy-storage sites consist of large lithium-ion batteries. These batteries store enough energy to serve as a back-up in case of fuel shortages. They are designed to absorb solar power and feed it back to the grid. These systems minimize the need for capital intensive power generation plants, thereby enhancing transmission and distribution efficiencies and thus reduce operational costs.

Utilities Market Overview

The utilities global market consists of sales of electric power, natural gas, steam supply, water supply, and sewage removal services by entities (organizations, sole traders, and partnerships) that provide these utilities to end consumers.
