## [Natural Gas Distribution Market Trends](#)

Natural gas distribution companies are using acoustic leak detection technology to monitor gas pipelines. This technology uses the principle of sound for pipelines of diameter 4 meters or larger. It consists of an acoustic sensor, tri-axial accelerometer and magnetometer, GPS system and detects irregularities associated with leaks in a pressurized pipeline. This helps in preventing

gas pipeline failures and thus improves gas distribution.

### Natural Gas Distribution Market Overview

The natural gas distribution market consists of sales of natural gas by entities (organizations, sole traders and partnerships) that operate gas distribution systems (mains and meters), including gas marketers that buy gas directly from the gas wells or storages and sell it through a distribution system, through gas brokers or agents that arrange the sale of gas over gas distribution systems operated by others. This industry includes establishments that transmit and distribute gas to final end-consumers only.
