Market Dynamics for Bariatric Surgery Devices

An increase in obesity cases and subsequent rise of bariatric surgeries. Initially, this surgery was considered to be the last resort when it came to weight loss. However, it has grown in popularity over the years as it is safer than other medical options such as medications and diet counseling. Over the past decade, there has been an increase in bariatric surgeries performed around the world. The American Society for Metabolic and Bariatric Surgeries reported that the number of bariatric procedures performed in the US rose to 158,000 in 2011, compared to 198,851 by 2020. The increasing number of bariatric operations is expected to lead to an increase in demand for related equipment and devices, thereby driving the growth of the market for bariatric surgery products. Bariatric surgery, which is the best and longest-lasting treatment for obesity and other related conditions, is consistent with this trend. Global obesity remains a serious public health problem. Adults with obesity incurred USD 1,861 more in medical bills than those who were healthy. Bariatric surgery can be an effective treatment for severe obesity. It results in weight loss, improvement or remission from many obesity-related conditions, and a better quality of life.
