A set top box (STB) is a piece of hardware that receives a digital signal, decodes it, and displays it on a television. This method necessitates the use of a computing equipment capable of converting digital signals to analog signals. As a result, the chipset is embedded in the set-top box. This chipset has memory, I/O ports, and extra storage. System on chip (SOC) and front end chips make up a set top box. Depending on the requirements, a system on chip (SOC) may contain digital signals, analog signals, or mixed signals. The front end of the set top box is in charge of receiving the broadcasted signal, demodulating it, and delivering digital data to the set top box decoder chip. Front end chips vary depending on whether the broadcasting environment is terrestrial, satellite, or cable.
