Topical Drug Delivery Global Market Report 2022 -
Market Size, Trends, And Global Forecast 2022-2026

The Business Research Company's "Topical Drug Delivery Market Report 2022" forecasts the topical drug delivery market share to reach a value of \$137.15 billion in 2022 at a compound annual growth rate (CAGR) of 8.8%. The Russia-Ukraine war disrupted the chances of global economic recovery from the COVID-19 pandemic, at least in the short term. The war between these two countries has led to economic sanctions on multiple countries, surge in commodity prices, and supply chain disruptions, effecting many markets across the globe. The topical drug delivery global market is expected to grow to \$186.51 billion in 2026 at a compound annual growth rate (CAGR) of 8.0%.

[Topical Drug Delivery Market Trends](#)

Technological advancement is a key trend gaining popularity in the topical drug delivery market.

Major companies operating in the topical drug delivery global market are developing innovative products with advanced technologies to strengthen their position in the topical drug delivery global market. For instance, in April 2022, Sol-Gel Technologies Ltd., an Israel-based dermatology company, and Galderma S.A., a Switzerland-based pharmaceutical company specializing in dermatological treatments and skin care products, introduced Epsolay (benzoyl peroxide, cream, 5%), utilizing Sol-Gel's microencapsulation technology for the treatment of inflammatory lesions of rosacea, which is patent protected until 2040. Sol-gel microencapsulation provides the advantage of entrapping molecules by forming inclusion complexes between essential oils (Eos) as guest molecules and beta-cyclodextrin as host in porous silica, making it more stable and resistant to environmental conditions. Silica acts as a protector for EOs.

[Topical Drug Delivery Market Overview](#)

The topical drug delivery market consists of sales of topical drug delivery devices by entities (organizations, sole traders, and partnerships) that are used to provide medication that are applied to the skin, to treat different conditions. It refers to the procedure of delivering a drug from a product on the skin to a local target site to produce a therapeutic effect. There are various common forms of topical delivery such as gels, lotions, powders, and patches, which are mainly formulated as ointments or creams.
