Key Trends In The Cardiovascular Devices Market

Leadless pacemakers are being used for certain medical conditions such as slow heart rate

(bradycardia), as they provide a less-invasive alternative to conventional pacemakers. A leadless pacemaker is a self-contained device that is inserted in the right ventricle of the heart without incisional access, leads, or a surgical pocket. Furthermore, the medical procedure for a leadless pacemaker can be performed in under 30 minutes, with few postprocedural restrictions. These devices are gaining popularity as they eliminate complications related to lead placement which includes cardiac perforation, pneumothorax, and lead dislodgement. Major companies manufacturing leadless pacemakers are Medtronic and Abbott.

### Overview Of The Cardiovascular Devices Market

The cardiovascular devices market consists of sales of cardiovascular devices and related services by entities (organizations, sole traders, and partnerships) that produce cardiovascular devices used in diagnosing and treating cardiovascular diseases.
