*The Business research  
company*

forecasts the injectable drug delivery devices market to reach a value of \$34.49 billion in 2021 to \$38.03 billion in 2022 at a compound annual growth rate (CAGR) of 10.3%. The Russia-Ukraine war disrupted the chances of global economic recovery from the COVID-19 pandemic, at least in the short term. The war between these two countries has led to economic sanctions on multiple countries, surge in commodity prices, and supply chain disruptions, effecting many markets across the globe. The injectable drug delivery devices market is expected to grow to \$55.89 billion in 2026 at a compound annual growth rate CAGR of 10.1%.

The increasing preference for self-injection devices is driving the injectable drug delivery devices market.

## [Injectable Drug Delivery Devices Market Trends](#)

The companies in injectable drug delivery devices are increasingly focusing on the manufacturing of auto-injectors. The auto-injectors are fully automated, highly customized, and reusable injectors that can be used by a patient to perform hundreds of injections. Patients can control the speed of dose delivery to help minimize pain or discomfort during injection. These devices can adjust the speed and depth of the automatic injection. For instance, LISA, a reusable auto-injector manufactured by Unilife corporation comes with an array of highly customizable features including Bluetooth LE connectivity, Wi-Fi or 3G connectivity, and pre-injection drug warming for target therapies. The injectable drug delivery technology market is expected to show significant growth in the coming years, due to various technological advancements and new product launches to improve the convenience and ease of administration of parenteral therapeutics.

## [Injectable Drug Delivery Devices Market Overview](#)

The injectable drug delivery devices market consists of sales of conventional syringes, needle-free injectors, auto-injectors, and pen injectors. These are used for various routes of drug administration, such as intravenous, subcutaneous, intradermal, intraperitoneal, and intramuscular, and others to treat medical conditions ranging from cancer to autoimmune disorders.
