

# Beer Processing Market 2022 Supply Chain Analysis, Demand and Import/Export Details 2030

NEWARK, UNITED STATES, December 5, 2022 /EINPresswire.com/ -- The global beer processing market is expected to reach USD 911.20 billion by 2028, at a CAGR of 5.95% during the forecast period 2021-2028. A key factor driving the growth of the global beer processing market is the increasing popularity of craft beer. Craft beer has experienced an unprecedented surge in demand, particularly among young consumers, owing to its unique taste and aroma. The demand for craft beer is further driven by its wide availability, as it can be found in almost every country across the world. In addition, the growing number of craft breweries and the availability of locally produced beer are expected to fuel the growth of the global beer processing market.

The increasing disposable income of consumers and the rising number of bars, pubs, and restaurants are also fueling the demand for beer. In addition, the increasing number of festivals and events, such as Oktoberfest, is further driving the growth of the global beer processing market.

However, the market is expected to be hindered by the presence of stringent government regulations, particularly in developed countries, which are aimed at curbing the consumption of alcoholic beverages. In addition, the increasing popularity of low-alcoholic and non-alcoholic beverages is expected to hamper the growth of the global beer processing market.
