Aquaculture is a rapidly expanding industry with the potential to provide nutritious and healthy food sources around the globe. This emerging field combines traditional and modern techniques to farm aquatic animals, such as fish, shellfish, seaweed, and other aquatic plants. The world's population is expected to reach 9 billion by 2050 and aquaculture has the capacity to help meet this rising demand for seafood while creating jobs in rural communities.

The benefits of aquaculture go beyond providing more seafood; it can also help preserve wild stocks of fish by reducing pressure on existing resources. Additionally, aquaculturists who

practice sustainable methods of farming can reduce their environmental footprint by limiting their use of natural resources like water or soil. Aquaculture offers an innovative solution for those looking to grow food in a responsible way that takes into account the needs of both people and the planet.
