DiTRA Corp Offers Infor Cloud ERP to Troubleshoot Unique Challenges of Distribution Business

The ERP is equipped with multiple features specifically designed to provide solutions to problems commonly encountered in the distribution business.

KATY, TEXAS, UNITED STATES, December 6, 2022 /EINPresswire.com/ -- DiTRA Corp, an IT services and consulting company, has recently offered the Infor Cloud ERP to distribution businesses to optimize their operations, and eliminate common problems arising from using outdated legacy systems. As a company that specializes in facilitating digital transformation across multiple industries, it has helped numerous clients adopt impactful digital solutions, and make smooth and effective transition to digital business models. The Infor Cloud ERP will be the latest IT solution DiTRA will be working with to transform the business practices of clients in the distribution industry.

The Infor Cloud ERP automates the business process of distribution companies across all critical departments ranging from order entry and processing, demand forecasting and purchasing, to warehouse and inventory management and more. The software is ideal for businesses operating in the distribution sector looking for a comprehensive [warehouse & inventory management system](#).

One of the most unique features of the Infor Cloud ERP is its ability to facilitate the flow of information between all functional areas of daily business operations. The information is reported based on real-time data which can be managed both on-premise or in cloud. Having a bird's eye view of their operations allows managers and operators to have awareness of

everything going in their system and easily take notice of underperforming departments or errors.

The software forecasts demands and future purchases based on historical data of past performance, and takes into account fluctuations of seasonality to make accurate predictions. When this is combined with a system recommended optimal order quantity and automated replenishment system, the ERP minimizes the risk of stock shortages or over replenishment. Another beneficial feature of the software is its cycle counting and quality receiving ability which provide a solution to a common and expensive problem which is inaccurate inventory counting.

Overall, the Infor Cloud ERP offers multiple features designed to optimize the business operations of distribution companies. For businesses looking for a warehouse & inventory management system, DiTRA Corp can integrate the software solution into their existing system and make an upgrade to make it compatible with the latest technologies and innovations in the distribution industry.

Speaking about their expertise, the company's director said, "Here at DiTRA, we offer a suite of quality methods and tools to transform your practices quickly and smoothly. We are committed to provide best fit services and products, and that is why we put together custom terms for each client case. We supply the right experts for the right job and we give you access to our pool of highly skilled consultants and technical specialists."
