Market Analysis and Insights Global eHealth Market

[E-health Industry](#) refers to the use of information and communication technology (ICT) in the healthcare sector. The information and communication technology (ICT) is being widely utilized in the form of medical apps, medical health records, and telemedicine.

The proliferation of high-speed internet across the globe acts as one of the major factors driving the growth of eHealth market. The high adoption of wearable devices, big data analytics, and (Internet of Things) IoT in healthcare sector, and increase in the government initiatives

supporting use of eHealth solutions and services accelerate the market growth. The rise in the need to manage regulatory compliance through use of eHealth solutions, and increase in the prevalence of chronic diseases such as cancer and diabetes, among others further influence the market. Additionally, surge in disposable income, formation of accountable care organizations, advancements in healthcare infrastructure, rapid digitization and availability of dynamic nature of health benefit plan designs positively affect the eHealth market. Furthermore, expansion of mHealth, telehealth, and remote patient monitoring sector, and use of eHealth solutions in outpatient care facilities extend profitable opportunity to the market players in the forecast period of 2022 to 2029.

On the other hand, high cost associated with the deployment and maintenance of eHealth solutions, and security concerns related to privacy, licensure, and data breaches are expected to obstruct the market growth. The reluctance among medical professionals to adopt advanced eHealth solutions, and lack of skilled IT professionals are projected to challenge the eHealth market in the forecast period of 2022-2029.
