/EINPresswire.com/ -- [Infrared Thermometer Market](#) Size Projections :

The global infrared thermometer market is estimated to be valued at US\$ 11.43 million in 2021 and is expected to exhibit a CAGR of 7.1% during the forecast period (2022-2028).

A particular kind of thermometer called an infrared thermometer determines temperature using some of the thermal radiation (also known as "black-body radiation") generated by the object being measured. A subset of equipment referred to as "thermal radiation thermometers" includes infrared thermometers. Because of its capacity to monitor temperature remotely, these are often referred to as temperature guns, laser thermometers, and non-contact thermometers. Holding the thermometer a specific distance away from the object frequently yields the temperature of the thing. In contrast to conventional thermometers, which take about a minute to measure the temperature, it records the temperature in a matter of seconds.
