From the name itself, it is clear that flavor enhancers are the food additives that are added to the food products to modify their existing taste. Flavor enhancers are added to enhance the taste, whether, sweet, sour, spicy or salty and texture of various food items and are available in the form of instant soup, snack food and frozen dinner.

Rising personal disposable income and growing demand for low-fat, low-salt and low-carbohydrate foods are the major factors fostering the growth of the market. Changing lifestyle, westernization, rising awareness about the availability of both naturally and synthetically produced flavour enhancers in the developing economies and rising health consciousness among the population are acting as market growth determinants. Improving distribution channel, rising health consciousness among people, growing popularity of healthy and low-calorie foods, surging consumption of meat and meat related products especially among the youngsters and changing tastes and preferences of consumers will further induce growth in the market value.

However, side effects on health associated with high consumption of food items with alternative sweeteners such as high blood pressure and allergies will pose a major challenge to the growth of the market. Fluctuations in the prices of raw materials and supply chain disruptions owing to the pandemic will further restrict the scope of growth for the market. Stringent and strict government norms related to sweeteners that consist of specific chemicals and ingredients will also hamper the market growth rate.
