## Key Trends In The Cutting Tool And Machine Tool Accessory Market

Machine tool manufacturers are producing 3D laser processing machines to reduce processing time for laser cutting and welding applications. 3D laser is a 5-axle laser machine that cuts sheet-metal components in three dimensions. Metals including mild steel, stainless less, and aluminum can be cut using lasers. Laser cutting significantly reduces the processing time required for cutting applications and thus reduces costs. Other benefits include localized laser energy input, high feed rate, and minimal heat input. 3D lasers are typically used in the automotive and aerospace industry for cutting or welding aluminum parts, drilling engine parts, and laser surfacing used parts. According to an article published by engineering.com, laser cutting machines account for the largest segment of the metal cutting machinery market thus indicating a significant rise in the use of this technology. Major companies producing 3D laser cutting machines include Mitsubishi Electric, Trumpf, LST GmbH, and Mazak.
