Zion Market Research Methodology

The rising geriatric population, increasing demand for patient safety, growing focus on healthcare accessibility, the prevalence of infectious chronic diseases, and rising healthcare expenditure are projected to be major trends positively impacting surgical apparel market growth through 2028

The increasing number of surgical procedures has substantially propelled the demand for surgical apparel and coupled with the emergence of chronic and rare diseases this has bolstered the market for surgical apparel on a global scale.

Surgical apparel companies could face major challenges in the face of the rising use of disposable surgical apparel that medical professionals are preferring to avoid the risk of crosscontamination and re-infection due to reuse.

In 2020, the pandemic bolstered the demand for the surgical apparel market and this gave a sudden boost to the market growth. Increased demand from across the world for surgical apparel during the pandemic gave surgical apparel manufacturers a lucrative opportunity to maximize their revenue generation potential but lockdown restrictions made it harder to capitalize on this opportunity. Products such as gowns, masks, and disposable gloves saw a massive increase in demand during the pandemic.

However, the market did not grow at its full potential due to the lockdown restrictions that were prevalent across multiple countries in the world. The surgical apparel market growth is expected to follow a steady increase in the post-pandemic era and is expected to benefit from rising focus on patient safety.

Report at <a href="https://www.zionmarketresearch.com/report/surgical-apparel-market">https://www.zionmarketresearch.com/report/surgical-apparel-market</a>

The global surgical apparel market is segregated based on type, product, end user, and region. Based on product, the global market is distinguished into gowns, gloves, masks, caps, scrubs, and others. The gowns segment currently leads the market and is expected to have a bright outlook through the forecast period. High demand from developing healthcare infrastructure in regions of India and China is expected to bolster sales of gowns.

The rising geriatric population, increasing investments in healthcare infrastructure, supportive government initiatives, and increasing prevalence of chronic diseases are some major factors that govern the surgical apparel market growth in the Asia Pacific region. China, Japan, and India are anticipated to emerge as noteworthy markets in this region owing to the rapid development of healthcare infrastructure and the growing patient pool for chronic illnesses in these nations.

The North American surgical apparel market is projected to have a bright outlook owing to the presence of key surgical apparel companies in the region and the presence of a highly developed healthcare infrastructure. An increasing number of surgeries performed in this region are expected to substantially influence sales of surgical apparel through 2028. The demand in this region is expected to be led by nations such as the United States and Canada which are seeing a substantial increase in their healthcare expenditure owing to the rising prevalence of chronic diseases.

Key players functioning in the global surgical apparel market include

Johnson & Johnson (US)
Baxter International Inc. (US)
Medtronic plc (US)
Boston Scientific Corporation (US)
GE Healthcare (US)
Smith & Nephew plc (UK)
Stryker Corporation (US)
B Braun (US)
