Aquarium chiller are a type of air conditioning unit that is used to cool water in an aquarium. They use a compressor to create cold airflow and a fan to distribute the cold air. Aquarium chiller can be used to cool both fresh and saltwater tanks.

The growth of the market can be attributed to the increasing popularity of fishkeeping and the increasing demand for artificial aquatic ecosystems.

Market Segment and Regional Analysis

Aquarium chiller can be classified into inline water chillers, drop in chiller, and multi-temp chillers. Inline water chillers are usually smaller and cheaper than drop in chiller and multi-temp chillers. They come with a built in water pump which extracts the cold water from the refrigerator or freezer and circulates it through the coils of the chiller. This type of aquarium chiller is suitable for low volume tanks where you only want to cool down specific parts of your tank and so on.
