Automotive conformal is basically a coating material that is designed to protect printed circuit boards and related equipment against various environmental conditions such as humidity, temperature, chemical damage, and others. It is a thin polymer film which fits in with a printed circuit board layout to protect the components.

The factors such as increasing demand from automotive sectors along with increasing adoption of electronics in vehicles has resulted in growth in the market value. Additionally, development of advance and newer technology is estimated to accelerate market's growth. However, higher price of replacement and repairing in case of damage will further restrict the scope of growth for the market.
