

AWS Insights from Amazon's Head of Security Solutions Architecture on The Virtual CISO Podcast from Pivot Point Security

Over 90% of breaches in the public cloud stem from user error, not the cloud

service provider. What goes wrong and what top practices eliminate security risks?

HAMILTON, NJ, UNITED STATES, December 21, 2022 /EINPresswire.com/ -- Public cloud security

If you're interested in improving security for your applications and workloads in the public cloud, you'll find this business-focused conversation with Temi Adebambo from AWS invaluable."

John Verry, CISO & Managing Partner

works on a shared responsibility model. For example, the CSP usually handles security for networks, hypervisors, and physical hardware while users generally need to cover things like identity management and instance configuration. So, why are orgs so often failing to protect themselves? And what are the recommended best practices to keep DevOps teams on track?

To explain exactly what's going wrong with public cloud security and how users can eliminate their biggest risks, the latest episode of The Virtual CISO Podcast features Temi Adebambo, Head of Security Solutions Architecture at Amazon Web Services (AWS). John Verry, CISO and

Managing Partner at Pivot Point Security, hosts the show.

Topics discussed include:

- The 2 mistakes public cloud users make that cause the most security breaches
- How using "higher-level" services can reduce your security burden
- Ideas for baking security into your DevOps pipeline without gating your developers
- The critical importance of "guardrails" for your team and how to implement them
- The top AWS security tools that pretty much all users should leverage

If you're interested in improving security for your applications and workloads in the public cloud, you'll find this business-focused conversation with Temi Adebambo from AWS invaluable.
