An ion selective analyzer (ISE) is an analytical method used to assess the activity of ions in aqueous solution by detecting their electrical potential. It has applications in pharmacology and biotechnology. ISE glass electrodes are classified into four types: crystalline electrodes, ion-exchange electrodes, and enzyme electrodes. The pH Electrode is a popular example of ISE. The pH electrode, which consists of a thin glass membrane that calculates the H⁺ concentration in a solution, is the most often used. Thermo Fisher Scientific Inc.'s Orion Versa Star Pro pH/ISE is an example of ISE. It is used for regular pH and ion concentration measurements.
