Thoracic outlet syndrome (TOC) is a collection of illnesses that produce numbness and tingling in the fingers, as well as pain in the neck, shoulder, and arms. The compression of blood vessels and nerves in the thoracic outlet (the region between the collarbone and the first rib) causes thoracic outlet syndrome. Damage to the shoulder or neck, anatomical anomalies, accidents from sports-related activities, obesity and chest tumours are all typical causes of thoracic outlet syndrome. Vascular, neurogenic and non-specific thoracic outlet syndromes are the three forms of thoracic outlet syndromes. Therapeutic medications such as anti-inflammatory drugs, anti-coagulation drugs, and muscle relaxants are used to treat thoracic outlet syndrome.
