Trending Non-Animal Alternatives Testing Market Trend

OOCs (organs-on-chips) tool for testing is a major trend in the non-animal alternatives testing

global market. Organs-on-a-chips (OOCs) are miniature tissues and organs grown in-vitro that enable the modelling of human physiology and disease. OOCs are now being explored worldwide as tools for developing disease models and accurately predicting drug efficacies and toxicities. The advantages of OOCs over cell culture, animal models, and human clinical trials have captured the attention of both the medical and pharmaceutical communities, focusing on developing targeted therapies. For instance, in April 2020, researchers at the Massachusetts Institute of Technology (MIT) in the US developed a new model for Organs-on-a-Chip to develop treatments for inflammatory diseases and afflictions. Organs-on-a-chip consist of millions of cells formed on a platform to replicate the functions of different organs and can be used as an instrument in analysing and creating new treatments for complex diseases without the use of animals for testing.

Non-Animal Alternatives Testing Market Segments

- By Technology: Cell Culture Technology, High Throughput Technology, Molecular Imaging, Omics Technology, Other Technologies
- By Method: Cellular Assay, Biochemical Assay, In SiliCo., Ex-vivo
- By End-User: Pharmaceutical Industry, Cosmetics & Household Products, Diagnostics, Chemicals Industry, Food Industry
- By Geography: The non-animal alternatives testing global market is segmented into North America, South America, Asia-Pacific, Eastern Europe, Western Europe, Middle East and Africa.
