[Trending Gene Therapy Market Trend](#)

The use of machine learning and artificial intelligence is gradually gaining popularity in the gene therapy market. Artificial intelligence (AI) is the simulation of human intelligence in machines, which are programmed to display their natural intelligence. Machine learning is a part of AI. Machine learning and AI help companies in the gene therapy market conduct a detailed analysis of all relevant data, provide insights between tumour and immune cell interactions, and offer a more accurate evaluation of tissue samples, which is often disputed between different evaluators. For instance, since January 2020, GlaxoSmithKline, a pharmaceutical company, has been investing in AI to optimise gene therapy and develop off-the-shelf solutions for patients. It is also expected to reduce turnaround time and the cost of gene therapies.

Gene Therapy Market Segments

- By Gene Type: Antigen, Cytokine, Suicide Gene, and Other Gene Types
- By Vector: Viral Vector, Non-Viral Vector, Other Vectors
- By Application: Oncological Disorders, Rare Diseases, Cardiovascular Diseases, Neurological Disorders, Infectious Diseases, Other Applications
- By End Users: Hospitals, Homecare, Specialty Clinics, Other End-Users
- By Geography: The global gene therapy market is segmented into North America, South America, Asia-Pacific, Eastern Europe, Western Europe, Middle East and Africa.
