Trending Nitrogen Fertilizer Market Trend

The urea market is witnessing rapid growth in the fertilizer market as it controls air pollution by

catalytic reaction. Urea is an easily water-soluble compound that consists of 46% nitrogen and can be stored, transported, and handled easily. It increases soil productivity and soil nutrients. According to the International Fertilizers Association (IFA), global urea capacity is going to increase by a net of 17 metric tons by volume each year, and the total production is estimated at 226 metric tons by 2021. Thus, the expected increase in the production of urea promotes the sales of nitrogen fertilizer.
