The key highlights of the report include:

## Market Overview (2015-2025)

- Historical Market Size (2020): USD 462 Billion
- Forecast CAGR (2022-2027): 6.1%
- Forecast Market size (2027): USD 661 Billion

The growing patient populations suffering from different diseases, increasing incidences of injuries, and growing research and development activities in the healthcare industry to produce technologically advanced medical devices are the key factors driving the growth of the market.

Moreover, the demand for medical devices is fuelled by the growing prevalence of cardiac disorders and the increasing geriatric population with various health problems.

Continued technological innovations are also one of the main factors driving the market development. The market for oxygen concentrators, insulin pumps, and image-guided therapy systems, among other healthcare products, has increased the preference for compact and less invasive medical technology, which is further bolstering the market growth.

## Industry Definition and Major Segments

Medical devices can be used for surgical operations, home healthcare, and in hospitals. A medical device is an instrument, device, implant, in vitro reagent, or related device that may be utilised for the diagnosis, prevention, or treatment of an illness within the body. It can be as easy as a medical thermometer, a tongue depressor, or protective gloves. It can also be as complex as a machine that can aid in medical research or an implant such as a stent or a prosthesis
