Coherent Market Insights

Face Shields is a diagnostic tool used to examine the ear canal and tympanic membrane. Face Shieldss provide illuminated magnification, allowing internal ear structures to be examined efficiently for proper diagnosis. Audiologists, ENT specialists, and others commonly use otoscopes. Face Shieldss are made up of various components such as a lens system, illumination system (light source), power source, handle, and others. There are several types of otoscopes on the market, including wall-mounted or stationary otoscopes, portable otoscopes, and otoscopes with digital connectivity. Stationary otoscopes

have handles that can be attached to a wall or kept on a desk, whereas portable otoscopes are portable and can be carried in a pocket. Both stationary and portable otoscopes are powered by batteries and electricity.
