

SendCutSend by the Numbers

2022 brought more accessibility, more power, and more services

RENO, NEV., UNITED STATES, January 11, 2023 /EINPresswire.com/ -- In 2022, SendCutSend had its largest year of growth since its 2018 inception. The online laser cutting company added international shipping to Canada, five new services, dozens of additional materials, and increased laser and bending power.

"Last year we really focused on power and services - more power means faster production and getting those parts to our customers faster," said Jim Belosic, CEO of SendCutSend. "We look forward to bringing even bigger things to our customers this year."

More Accessibility

Canadian customers now have access to affordable laser cut parts with no minimum quantities, parts starting at less than \$1 (\$29 minimum order), 2-4 day production, instant quotes, and a flat rate shipping of \$19 on standard orders.

SendCutSend's app received 302 major improvements (and about 5,000 small ones). Customers can now batch upload up to 10 drawings at a time, track orders through more than 12 production steps, and review CNC bent parts with advanced 3D previews. Through improved nesting strategies SendCutSend is also reducing waste (and cost to the customer).

The team worked on improving all aspects of the production process including shipping. Shipping is now faster and available seven days a week to residential addresses.

More Power

SendCutSend added 21 kilowatts of laser power to the cutting arsenal bringing the total cutting capacity to almost 60kW. In addition, the facilities increased CNC bending capabilities by 160 tons of bending power.

These improvements sped up production and got parts out the door even faster. The additional power meant more than 750 tons of material was processed and shipped to our customers.

Speaking of power, SendCutSend also unveiled a custom, turbine-electric streamliner, dubbed [Jet-A-Send](#), at the SEMA tradeshow in Las Vegas.

More Services & Materials

Perhaps the biggest part of 2022 was the [plethora of new services](#). From waterjet cutting to powder coating, to hardware insertion (PEM hardware), SendCutSend is on its way to being a one-stop shop.

With cutting services expanding to include Waterjet (joining Laser and CNC Routing), customers now also have access to seven post-processing services including Anodizing, Bending & Forming, Countersinking, Hardware, Powder Coating, Plating, and Tapping.

New additions were also made to the [materials list](#): G10 (FR-4 grade), Chipboard, Hardboard, 316 Stainless Steel, and G30 Steel.

Overall 2022 was a year of growth, with 53 people added to the team (fueled by 7,920 coffee pods) and 2.8 million parts cut (equating to more than 1,350 miles or 84,600,000 inches of cutting). SendCutSend plans to continue the growth trajectory into the new year. Plans include a third U.S. location to serve customers even faster, the addition of dozens of new materials, and the pursuit of even faster turn and lower prices.

About SendCutSend

SendCutSend is an industry-leading, on-demand rapid manufacturing company with facilities in Reno, Nev., and Paris, Ky. serving the United States and Canada. Founded in 2018 by two software engineers with an eye for innovation, SendCutSend was designed to bridge the gap between quality, speed, and convenience in the manufacturing industry. The idea for SendCutSend began in a garage and has since evolved into a nationally recognized brand. Pushing the boundaries of modern business, SendCutSend provides custom, rapid manufacturing for like-minded companies and makers in various niches who seek to make the impossible, possible.
