Blaze.tech Launches and Raises $3.5 Million Pre-Seed Round for AI-Powered No-Code Software Development
Blaze helps organizations improve their operations and productivity by enabling them to build software and apps without writing any code.

LOS ANGELES, CALIFORNIA, USA, January 11, 2023 /EINPresswire.com/ -- Blaze.tech, the smarter no-code platform that's revolutionizing the way teams build web apps and tools, announced its official launch and has raised a $3.5 million pre-seed round led by Flybridge Capital and MaC Venture Capital. The round also included participation from investors and unicorn founders in enterprise SaaS including Vlad Magdalin (CEO, Webflow), Mada Seghete (Co-founder, Branch), Mark Schopmeyer (Co-CEO, CaptivateIQ), ACTAI Ventures, Sangha Capital, and Bill Tai. This funding round will accelerate Blaze's growing customer base, increase the platforms' integrations, and expand its AI capabilities.

Today's public launch follows a successful beta phase in which Fortune 500 companies and startups used Blaze to build dashboards, HIPAA compliant apps, complex workflows, automated invoice generators, and inventory management systems all without writing any code. Because of Blaze's emphasis on security and its robust suite of enterprise security features, the
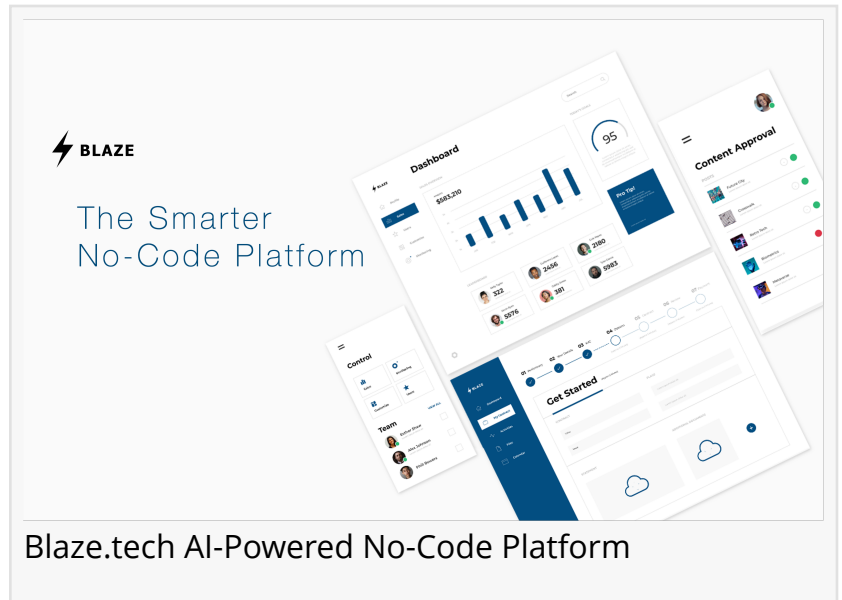

company has found popularity with organizations in highly regulated industries like healthcare, legal, construction, transportation and logistics, and finance.

With Blaze's AI-powered no-code platform, teams are able to create and launch highly custom and secure applications and internal tools in minutes. Blaze gives non-technical people the superpower to be entrepreneurial product builders with an intuitive all-in-one drag-and-drop interface and AI system. Blaze AI is powered by OpenAI's GPT-3 model, the same one used by ChatGPT. App creators can tell Blaze AI to create complex workflows, automatic triggers, custom filters, advanced calculations, and more.

Blaze.tech AI-Powered No-Code Platform

Blaze improves operations and productivity, and with pre-built integrations into Airtable, DocuSign, Freshdesk, Google Sheets, Salesforce, Stripe, Shopify, and many more tools, users can build multiple apps on top of their existing tech stack.

The no-code/low-code market is one of the fastest growing markets (from $25 Billion to $187 Billion in 2030), and Blaze's unique positioning is enabling teams to build software with complexity, customizability, and security that otherwise would require writing code.

"We're so excited to maximize the talents of people inside organizations by giving them the ability to solve business problems with software," said Nanxi Liu, Co-CEO of Blaze. "We're seeing individuals supercharge and significantly increase the efficiency of their team's operations with Blaze."

"Our users can implement their app's business logic in just a few clicks because Blaze has done all the difficult work on the technical side to provide a platform that generates intuitive front-ends and secure, scalable back-ends," said Tina Denuit-Wojcik, Co-CEO of Blaze.

"We are thrilled to support the Blaze team in their mission to create powerful tools and dashboards without the need for expensive engineering resources," said Adrian Fenty, General Partner and Co-Founder of MaC Venture Capital. "Nanxi and Tina have the business acumen to be huge disruptors in the industry, and because they've experienced these challenges first-hand, we know Blaze is building a top tier product."

"Nanxi and Tina are exceptionally talented founders with deep insights into the needs of Blaze's

customer base. Having watched how well they led and capital efficiently managed their prior company to significant success, we were delighted to invest in this dynamic duo," said Chip Hazard, General Partner and Co-Founder of Flybridge Capital.

Additional investors in the round include Dean Schnider (Partner, Najafi Companies), Felicia Curcuru (CEO of Binti), Holly Liu (Co-Founder, Kabam), Lin Capital, Michael Einziger (co-founder of the band Incubus), Mike Lu (co-founder of Triller), Root and Shoot Ventures, Socially Financed, and The K Fund.

About Blaze.tech
Blaze.tech is the smarter no-code platform that's revolutionizing the way teams build web apps and tools. Blaze's AI-powered platform improves operations and productivity by enabling non-technical people to build and launch custom software in minutes, without writing any code! From dashboards and workflows to portals and more, Blaze's all-in-one-builder has pre-built integrations, security and reliability.

Blaze is headquartered in Los Angeles and was founded in 2022. The founders, Nanxi Liu and Tina Denuit-Wojcik, previously founded Enplug, a leading digital signage software, which was acquired in 2021.
