Suprapubic catheter is a hollow flexible tube intended to create a passage between the urinary bladder and skin to drain urine from the bladder of the individual suffering from obstruction of normal urinary flow. Swelling of the prostate, traumatic disruption of urethra, congenital defects of the urinary tract, or obstructions of kidney stones passed into the urethra can block the normal urinary flow. Suprapubic catheterization refers to the placement of a drainage tube into the urinary bladder just above the pubic symphysis. This is typically performed for individuals who are unable to drain their bladder via the urethra. Suprapubic catheterization offers an alternative means to drain the urinary bladder when other methods are not clinically feasible, undesirable or impossible. This activity reviews the technique of suprapubic bladder catheterization, its indications, contraindications and role of the interprofessional team in the management of patients who are not able to void urine.

Global suprapubic catheter market was valued at US\$ 15,392.75 million in 2022 and is expected to exhibit a CAGR of 7.3% during the forecast period (2023-2030).
