As the approaches the third decade of the twenty-first century, the building industry has begun to shift toward prefabrication and other manufacturing processes, not only to avoid labour shortages but also to build faster, more efficiently, and with less materials.

The world is on the verge of entering the Fourth Industrial Revolution. Prefabrication, generative design, and virtual reality—along with robotics, reality capture, and 3D printing—will alter the architecture, engineering, and construction sectors throughout that age, enabling for much

faster and safer building construction while also saving significant money.

Rising demand for advanced construction materials to drive market growth

The October 2017 wildfires in Northern California, which damaged thousands of homes, may serve as an impetus for further use of prefabricated dwellings. Long wait times for residents wanting to rebuild have resulted from a limited labour market and the state's rigorous building rules. Startups such as Connect Homes and Acre Designs have stepped in to fill the gap, producing construction supplies and allowing consumers to create smart, energy-efficient homes in a fraction of the time and with less effort.
