Organ-on-a-chip Market Dynamics:

□□ Organ-on-a-chip is expected to cater to wide range of applications ranging from disease modelling to patient stratification and phenotypic screening. Most of the demand is expected to be generated from lung-based organ culture, followed by kidney application. The technology offers better clinical examinations compared to petri dishes and animal testing – helping scientists and companies to better understand the functioning of internal organs such as the brain and lungs.

□□ Funding and government initiatives are projected to further boost market growth in the near future. Though the market is expected to create substantial opportunities, high cost and early stage in R&D are some of the factors leading to slow growth of the market. Market is expected to witness rampant commercialization post-2020.

Regional Outlook:

- North America (United States, Canada and Mexico)
- Europe (Germany, UK, France, Italy, Russia and Turkey, Rest of Europe)
- Asia-Pacific (China, Japan, Korea, India, Australia, Indonesia, Thailand, Philippines, Malaysia and Vietnam Rest of Asia)
- South America (Brazil, Argentina, Columbia, Reset of South America)
