

Opkey Launches DevOps platform for Oracle Cloud ERP

Opkey's new DevOps platform provides an all-in-one solution for enterprises to shorten their Oracle Cloud ERP implementation lifecycle.

DUBLIN, CA, USA, January 17, 2023 /EINPresswire.com/ -- [Opkey](#), the industry leader in test automation for packaged applications, is proud to announce the release of their DevOps platform for Oracle Cloud ERP, which helps enterprises fully embrace DevOps when implementing their Oracle Cloud ERP.

This new platform allows users to streamline their implementation of Oracle Cloud ERP by integrating DevOps best practices including Continuous Integration and Continuous Deployment (CI/CD) and Test Automation during their implementation.

“

We built this platform after hearing from hundreds of customers about how difficult it was to implement their Oracle Cloud ERP quickly, and without risk.”

Pankaj Goel, Opkey's CEO

This helps clients speed up their delivery of critical business applications while providing full visibility to all stakeholders during the implementation process.

“It is well known that ERP implementations are often delayed and fail to meet the expectation of business stakeholders. We are proud to offer another innovative platform, as an extension to our best-in-class Oracle Cloud ERP test automation platform, to help business leaders

meet the tight timelines of these projects and accelerate the ROI for their ERP transformations,” [Pankaj Goel](#), Opkey's CEO said.

Millions of enterprises around the globe are embracing DevOps to shorten their software development lifecycles and provide continuous delivery of high quality software. But the vast majority of Oracle customers struggle to integrate these DevOps practices with their Oracle Cloud ERP implementation.

Not anymore.
