Pneumococcal Testing Market Growth Drivers and Risks

There is a growing trend for using pneumococcal conjugate vaccines (PCV) in developed countries as well as in regions such as Asia Pacific and South America. This is due to the fact that these vaccines offer better protection against pneumonia compared to existing vaccines. However, the growth of the pneumococcal testing market is also subject to various risks such as regulatory uncertainty, lack of innovation in the technology sector, and increasing concern over

antibiotic resistance. Thus, while the overall growth of the market is expected to remain high, these risks could hamper its growth prospects in certain regions or countries.
