[Microcrystalline Cellulose Market](#) Value and CAGR

Microcrystalline cellulose (MCC) is a type of cellulose that is used in a wide range of applications such as food, pharmaceuticals, and personal care products. It is made from wood pulp and is used in a variety of products as a bulking agent, flow agent, and texturizing agent.

The global microcrystalline cellulose market was worth approximately \$1.7 billion in 2018 and is expected to be worth \$2.5 billion by 2025, growing at a 7.9% CAGR during the forecast period (2019-2025). The rising demand for MCC in the food, pharmaceutical, and personal care industries is propelling the market forward.

This has resulted in the introduction and use of innovative non-wood-based alternatives made from agricultural waste, which has aided market growth. Furthermore, the market is expanding as consumer preferences for plant-based ingredients in cosmetics and personal care products shift. Some of the key trends that are likely to persist in the market for the foreseeable future are facility expansions, acquisitions, and collaborations, as well as R&D investment.

Microcrystalline Cellulose Market Growth Drivers and Risks

The following are some of the primary drivers of the MCC market: Growing demand for MCC in pharmaceuticals: MCC is widely used as a filler, binder, and disintegrant in the production of tablets and capsules. The pharmaceutical industry's demand for MCC is being driven by rising demand for generic drugs and over-the-counter (OTC) medications. MCC is used as a fat replacer and texture improver in food and beverage products, particularly functional and fortified foods that are intended to provide health benefits beyond basic nutrition.

The following are some of the risks that may affect the MCC market: Raw material price volatility: Because MCC is made from refined wood pulp, fluctuations in raw material prices, such as wood pulp, can affect the price and availability of MCC. Competition from other bulking agents and flow improvers: MCC faces competition from other bulking agents and flow improvers such as starch and polyethylene, which may impact market demand.

Microcrystalline Cellulose Market Key players

The Major players working in the worldwide microcrystalline cellulose market are DuPont, Asahi Kasei Corporation, JRS Pharma, Roquette Frères, Mingtai Chemical Co., Ltd., Accent Microcell Pvt. Ltd., JRS Pharma, Pharmatrans-Sanaq AG, DFE Pharma, Weiming Pharmaceutical MFG. Co., Ltd, and Sigachi Industries Pvt. Ltd.

Reasons Why You Should Buy This Report

- The Microcrystalline Cellulose Market report is a compilation of data from different sources and has been put together in a way that makes it easy for the reader to understand.
- It covers a wide range of topics, including Microcrystalline Cellulose Market current trends, market size, and forecasted growth.
- The Microcrystalline Cellulose Market report provides valuable insights that can help you make informed decisions about your business. The data is accurate and up-to-date, so you can trust the information presented.
- This Microcrystalline Cellulose Market report is an excellent resource for business owners who are looking to gain an understanding of the market landscape and potential opportunities.
- It will help you identify growth sectors and predict future trends of Microcrystalline Cellulose Market
