The global orthopaedic splints market was worth USD 1.54 billion in 2020 and is expected to grow at an 8.7% compound annual growth rate (CAGR) between 2021 and 2029. The rising number of bone fractures and an ageing population are expected to drive market growth.

Furthermore, an increase in the number of musculoskeletal disorders is expected to drive market growth. Because of prolonged lockdowns in various countries around the world, the number of bone fracture cases has decreased. Market participants saw a drop in both their segment and overall revenue.

Orthopedic Splints Market Growth Drivers and Risks

Some of the factors that may propel the orthopaedic splints market include: Orthopedic splints are commonly used to manage conditions such as arthritis, fractures, and sprains, which are becoming more common as a result of factors such as an ageing population and sedentary lifestyle. Technological progress: New materials and designs for orthopaedic splints, such as those that are lighter and more comfortable to wear, may lead to increased demand for these products.

Some of the potential risks to the growth of the orthopaedic splints market include: Alternative treatments: Orthopedic splints may face competition from alternative treatments such as physical therapy or surgery, which may limit demand for these products. Pricing pressures: The price of orthopaedic splints varies greatly depending on the material and design. Market competition may result in pricing pressures, affecting the profitability of these products.
