

Simply IT Warns of Increased Frequency Of Cyber Attacks

Experts at Simply IT warn of the increased frequency of cyberattacks in 2023.

OCALA, FL, US, January 25, 2023

/EINPresswire.com/ -- According to

[cybersecurity](#) experts, the increase in incidents is mainly attributed to the conflicts overseas.

"The geopolitical events in the past year have profoundly impacted major cybersecurity

operations for public and private organizations across the world." Said a cybersecurity expert with [Simply IT](#).

Simply IT makes IT Simple for Business

According to experts, cybercriminals consistently work to find new holes in systems and innovative ways to break into some of the most secure networks. No network is secure because when probed for long enough and hard enough, there will be holes that surface, and when that happens, the criminals are there to capitalize on it. Then there are hackers that offer their services for a fee, and they are continually working on honing their skills, meaning 90% of the vulnerabilities they are aware of and can take advantage of are relatively unknown.

"Over the past couple of years, we've seen a continuous expansion of cybercriminals selling their services, both in the form of ongoing phishing attacks and ransomware. The fact is that social engineering is also constantly advancing, and the tactics used will continue to improve thanks to the easy availability and improvements in artificial intelligence systems like Chat GPT. If anything, these will get harder to field." Said an Steve Condit with Simply IT.

He added, "The only way for businesses to keep their data, business and customers safe is to invest in ongoing professional cyber security services like the type we provide. Simply IT ensures that your business is one step ahead of cybercriminals."

It is essential for businesses, regardless of size, to invest in professional cyber security and [IT support](#) services. This approach helps to ensure that there are always experts countering cyber criminals ensuring that business networks are relatively safer than they otherwise would be, with potential holes patched before they can be exploited.

Companies like Simply IT provide cybersecurity solutions to a growing number of businesses in the US. Readers can find out more by visiting the company's official website at <https://simplyit.biz>.
