

FormDr Focuses on API Integrations for Current and Future Customers

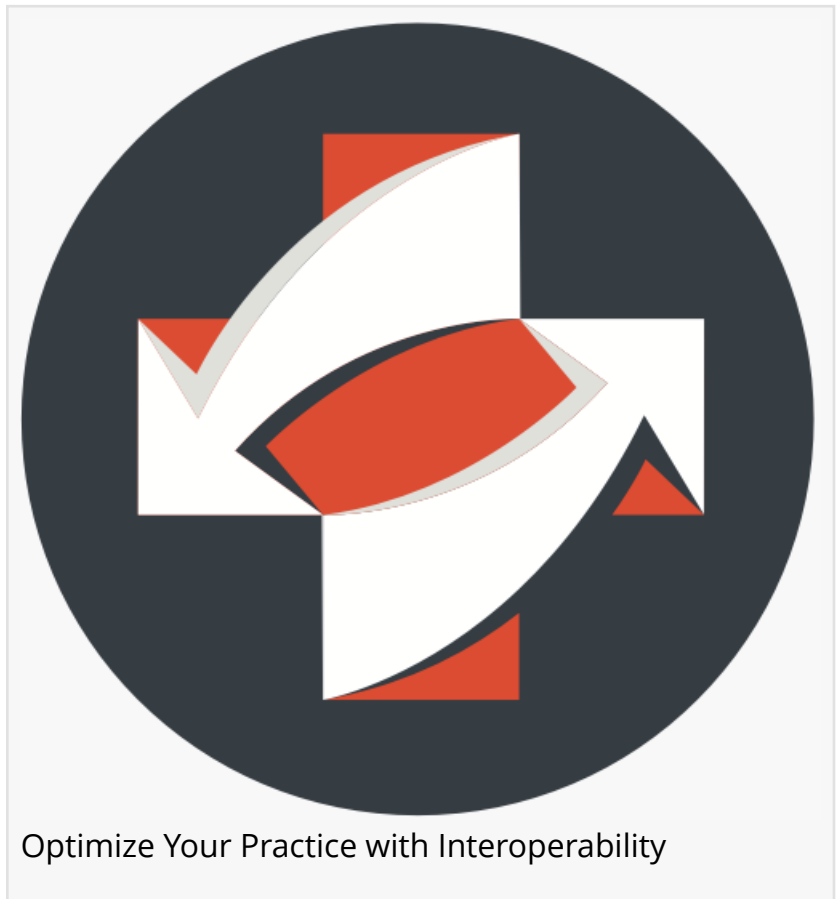

SAN FRANCISCO, CA, USA, January 26, 2023 /EINPresswire.com/ -- FormDr, the leading automation platform for [HIPAA-compliant online forms](#), emphasizes interoperability as a key feature of its current and future services. FormDr was founded on the concept of providing businesses with everything needed to easily send and receive HIPAA-compliant forms online, and now electronic information sharing is more secure and intuitive than ever with HL7 and API integrations.

With both HL7 and API integration opportunities, practices can seamlessly connect patient information from FormDr to their other systems - EMR, EHR, or CRM. This allows practices and business the ability to build even more custom integrations specific to their

practices needs. Healthcare organizations that successfully integrate their software systems with FormDr can offer a better patient and provider experience, save money, and help prevent errors and rework.

Health data, such as [online intake forms](#), screening forms, and insurance information can be securely completed by patients on-the-go from a smartphone, tablet, or computer. With an HL7 or API integration set up, this data is then shared from FormDr to the connected system in the way most suitable to the practice's workflow. No more searching through separate applications, scanning documents in, or requesting information twice. Practices can develop the personalized work system they always dreamed of with FormDr's extensive library of customizable form templates, automated features, and first-class support.

About FormDr:

FormDr provides software and support to help companies automate HIPAA-compliant forms online. This powerful solution securely works on any device, streamlining processes and increasing compliance. Today, more than 10 million patients, clients, and employees across more than 9 countries use FormDr's easy-to-use tools to customize and electronically prepare, send, receive, and manage forms online.
