Market Overview:

Medical illumination systems are devices used to assist doctors during surgical procedures and examination of patients, by illuminating light on a local area. Medical illumination systems provide good illumination on flat, narrow, and deep surfaces in a cavity. Central illuminance of medical illumination system ranges between 40,000 and 160,000 lux. Light of medical illumination helps distinguish the true color of the tissue in a cavity, owing to multiple light sources fixed to the system to help to reduce shadowing for consistent lighting despite obstacles such as head or hands of surgeons. In case of power cuts, the light is restored within five minutes from the supply cut with at least 50% of the previous lux intensity and retains its original intensity within 40 seconds.
