Market Overview:

Dental braces are commonly used in orthodontic treatment to improve an individual's orofacial appearance. Malocclusions (tooth overcrowding or crooked teeth), overbites, deep bites, cross

bites, under bites, and incorrect jaw positions are some of the conditions that affect the orofacial appearance and other orthodontic problems. Malocclusions often lead to lack of confidence in a person. Dental braces are placed on teeth, in order to realign the position of teeth. Dental braces apply pressure, which leads to change in the shape of bone.
